

## Class I Compost

---

### Application Rates:

#### As a Top Dressing —

EcoGro® is excellent as a top dressing. It has a full range of nutrients essential to plant growth and health. Recommended for use in the spring and fall. Combine your top dressing with aeration.

- 1/4" Deep or 1 CY/1000 sq ft

#### As a Soil Amendment —

EcoGro® can be used at any time of the year, in any type of soil. It is especially well suited for use when higher nutrient values are desirable. EcoGro® should be incorporated thoroughly into the soil 6 to 8 inches deep.

- 3CY/1000 sq ft or 1" Deep

**Compost has an array of physical, chemical, and biological properties**

**... which are difficult to find in any other single product.**

EcoGro®, a **Class I quality compost**, is made from tree trimmings, food waste, yard waste, leaves, etc. A stable organic matter, it is a good source of nitrogen, phosphorus, potassium, sulfur and other nutrients essential for plant growth. These nutrients are made available to the plant roots in a slow release form.

EcoGro® compost has a healthy population of naturally occurring microorganisms. These organisms improve soil structure, creating passageways in the soil for the movement of air, water, and nutrients. EcoGro® contains significant quantities of organic matter necessary for water retention and provides food for the soil organisms, which in turn “feed the plants.” It helps return many properties to the soil which have been lost over time and with use. This Class I compost can be used with all types of plants and soil (sandy to clay).

EcoGro® is listed by the Colorado Department of Agriculture as an amendment approved for use on Organically Certified Crops. Independent testing by Colorado State University confirms that EcoGro® safely provides higher levels of nutrients. By using EcoGro®, we help complete the ultimate recycling process.
