

PLAYSOFT™

Playground

Surface

Material

PLAYSOFT™ is a product that is manufactured and processed to meet the newest standards for playground materials. It has been certified to meet or exceed the ASTM testing requirements when it is used as recommended by the U. S. Consumer Product Safety Commission for playground surfaces.

PLAYSOFT™ has been tested for wheelchair accessibility (ASTM F1951-99) and shock absorbency (ASTM F-1292-96) when it is used at the recommended 8" to 12" depth for playground surfaces.

This product is being recognized by Architects, Insurance companies, Parks and School Districts to minimize hazards on the playground and to increase accessibility.

PLAYSOFT™ is 95% bark free and is also free of twigs and leaves. No chemical treatments or additives are allowed. No recycled wood from pallets or waste wood is permitted due to the possibility of contamination and the risk of poor surface stability.
